INHERITED MUTATION REPORT

• Genetic changes in every cell of your child’s body
• We don’t know which types of information will be found for each child
• Report might include information about:
  – How your child developed cancer
  – Your child’s risk of getting another cancer in the future
  – If your child has an increased risk of getting another type of disease (not cancer) for which additional medical care is recommended
  – How your child’s genetic make-up may affect his/her response to certain medicines
  – Other family members’ risk for disease
