

INHERITED MUTATION REPORT

- Genetic changes in every cell of your child's body
- We don't know which types of information will be found for each child
- Report *might* include information about:
 - How your child developed cancer
 - Your child's risk of getting another cancer in the future
 - If your child has an increased risk of getting another type of disease (not cancer) for which additional medical care is recommended
 - How your child's genetic make-up may affect his/her response to certain medicines
 - Other family members' risk for disease
